DT CONNECT

Streamlined testing & asset management

XTR series

Download on the App Store

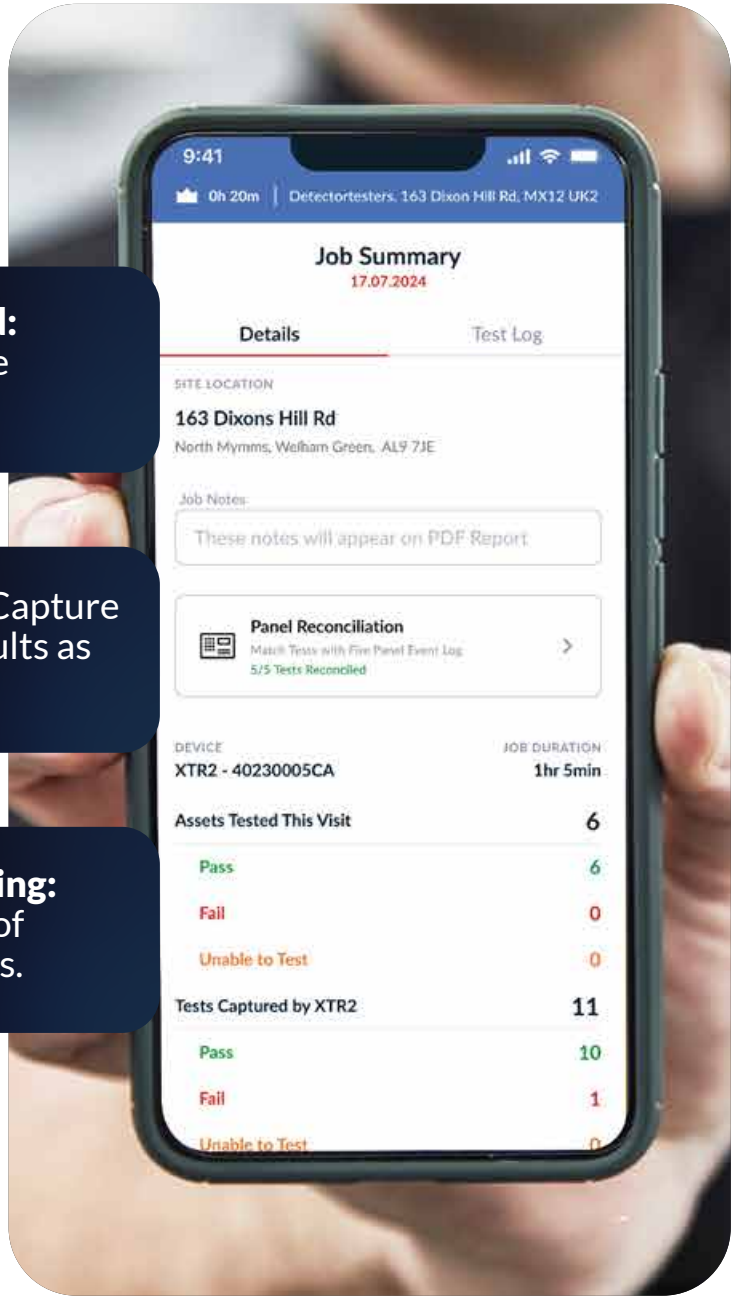

GET IT ON Google Play

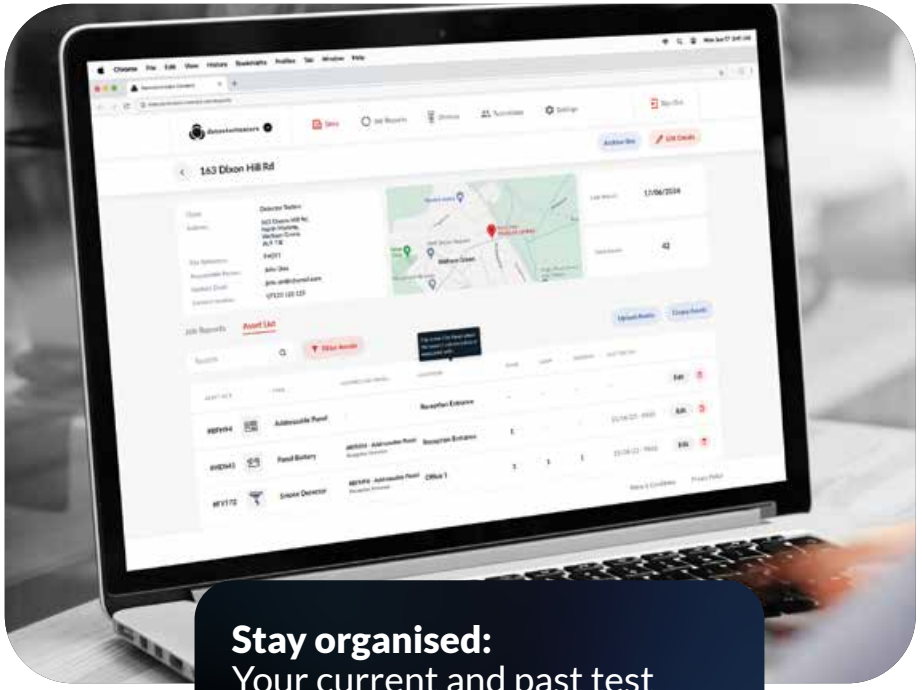

DT CONNECT

Everything tracked: Manage all your site devices efficiently.

Real time results: Capture and record test results as you go.*

Automated reporting: Instant generation of detailed test reports.

Stay organised: Your current and past test history all in one place.

Ditch the Paper. Deliver Faster.

Replace clunky worksheets with a streamlined, compliant testing and reporting workflow — built for engineers who want to get it right, fast.

*Paired with XTR2 or XTR Pulse

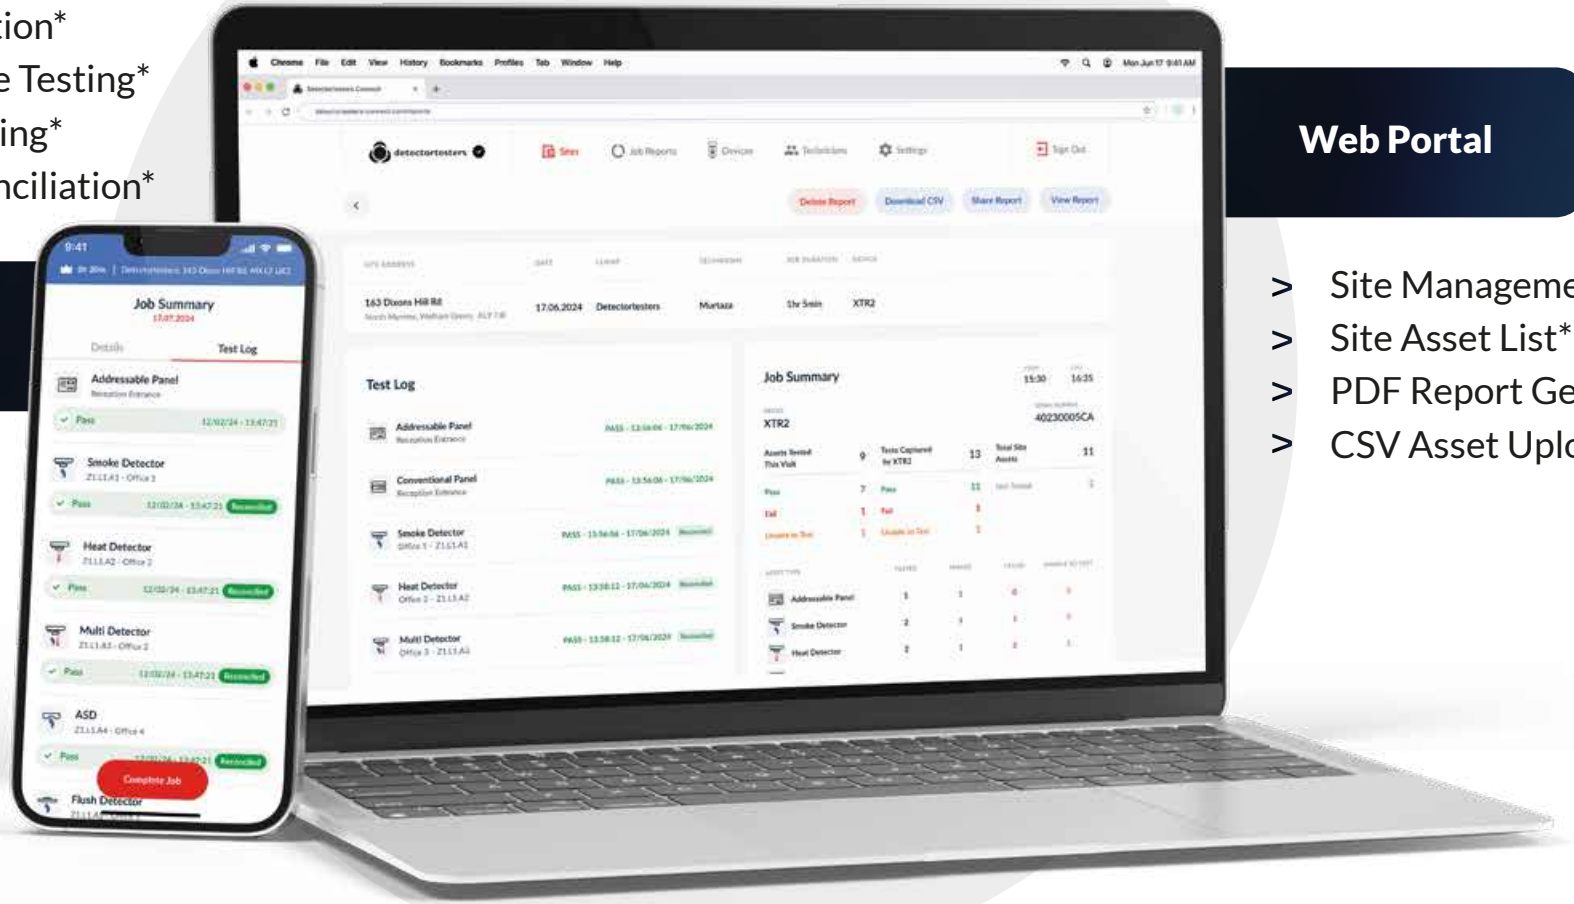

Key features that drive efficiency, accuracy and compliance

- > Automated Testing
- > Asset Creation*
- > Existing Site Testing*
- > Asset Filtering*
- > Panel Reconciliation*

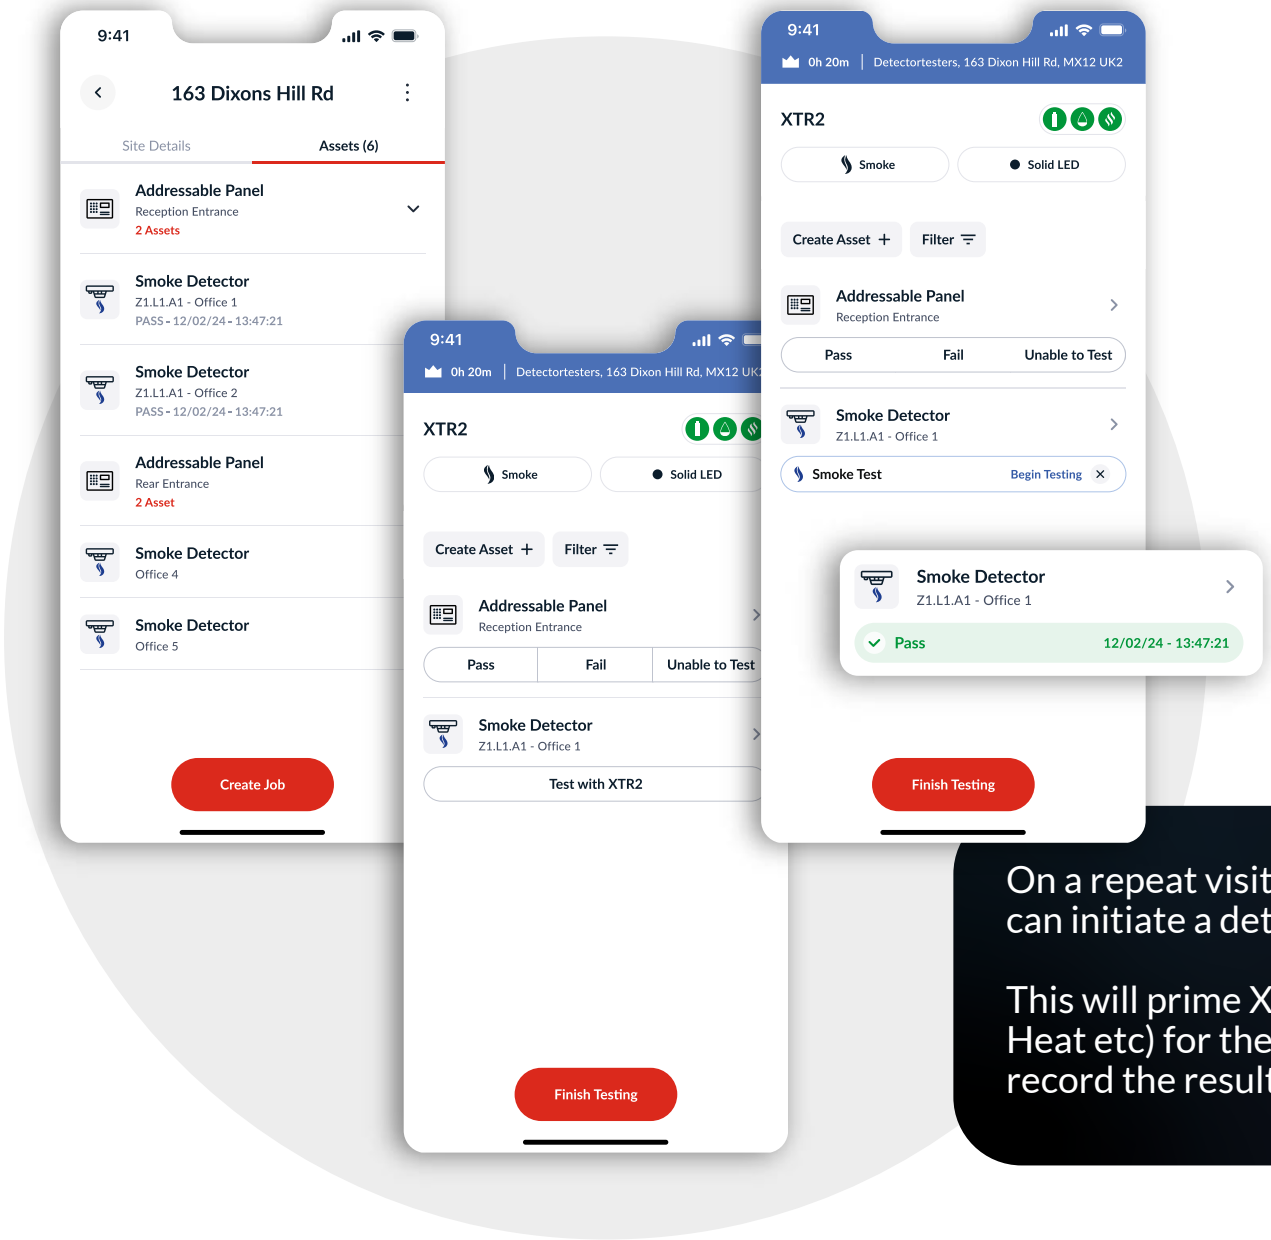

App

Web Portal

- > Site Management
- > Site Asset List*
- > PDF Report Generation*
- > CSV Asset Upload*

*Premium DT Connect features

A streamlined testing process

Sites & asset lists enable the engineer to perform repeat visits using data stored from first inspection.

Not only can they see what has been tested already, the engineer can select and test assets faster than ever. No more data entry, no more paperwork.

On a repeat visit with XTR2, the engineer - in one tap can initiate a detector asset test using 'Test with XTR2'.

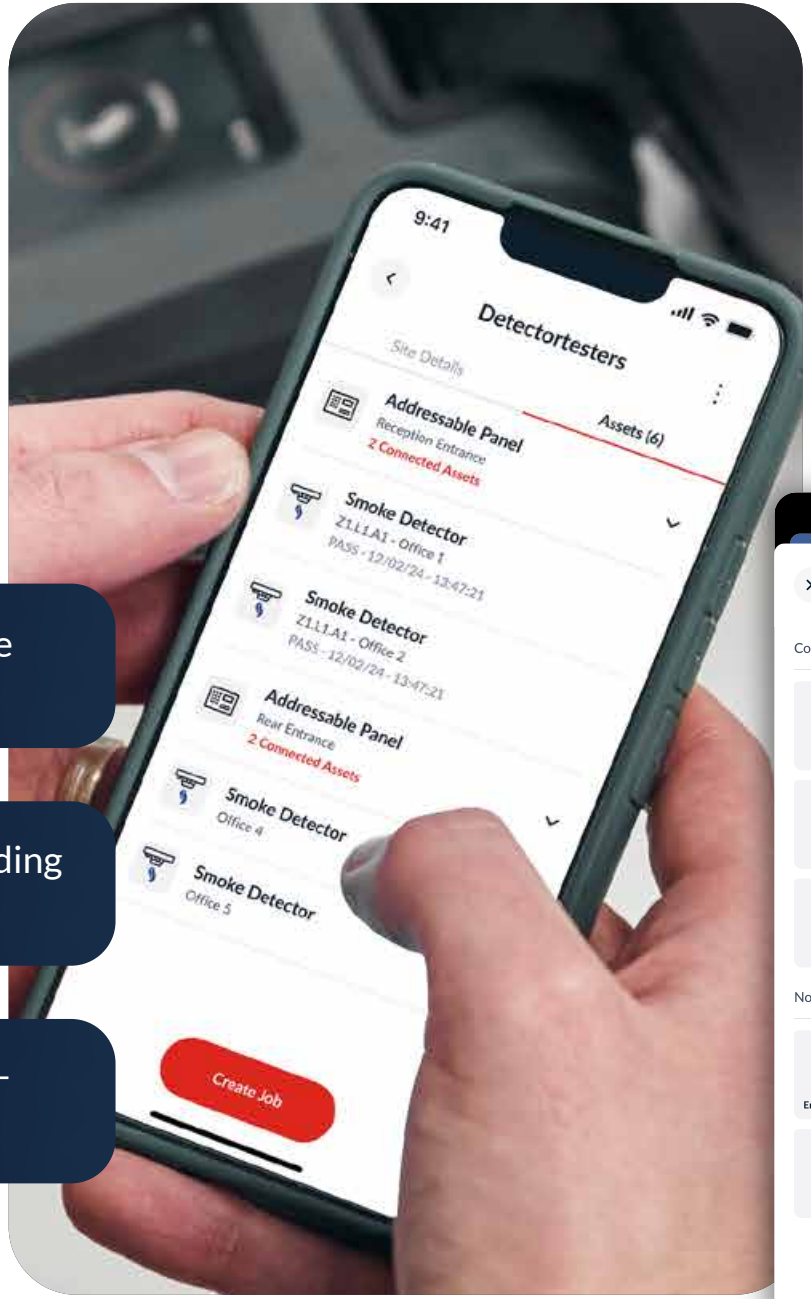

This will prime XTR2 with the correct test type (Smoke, Heat etc) for the engineer to perform the test and record the result against the asset.

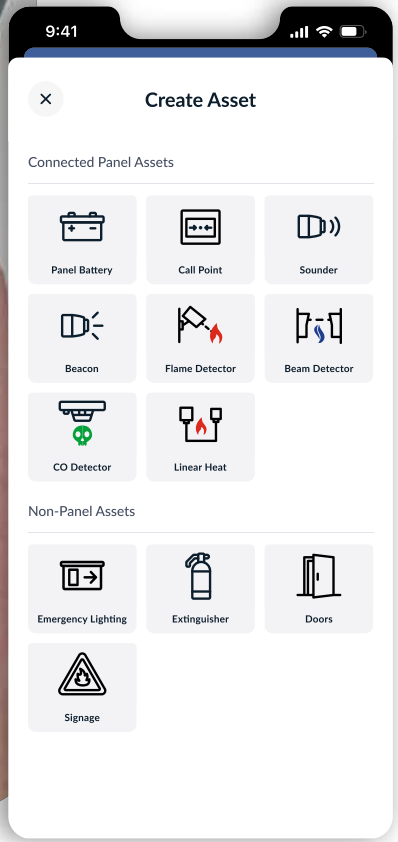

DT CONNECT

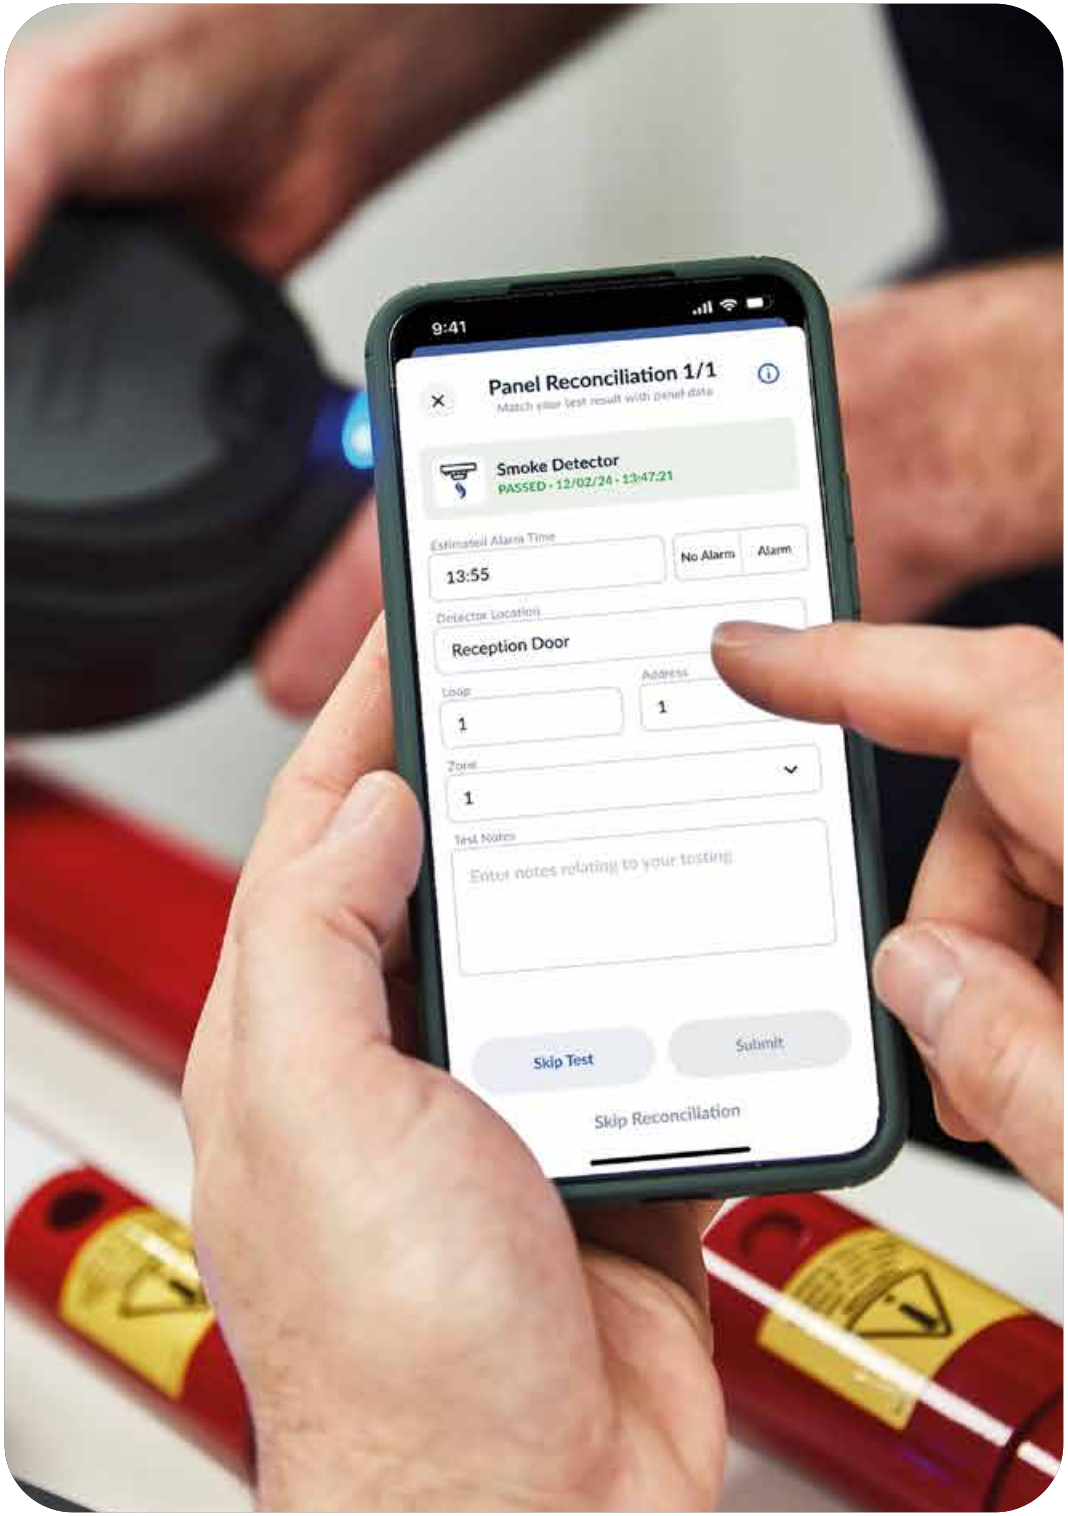

Comprehensive asset management

Build complete asset lists for each of your sites as you test, giving you the option to input location, loop and address.

- Create site pages for each building and include the asset list and related reports.
- Accurately account for all assets on site, including detectors, call points and emergency lighting.
- Build a history of when each asset was tested - ready for future site visits.

Full test loop. Closed.

Reconcile each of your tests against the fire panel event log to ensure complete and accurate test records.

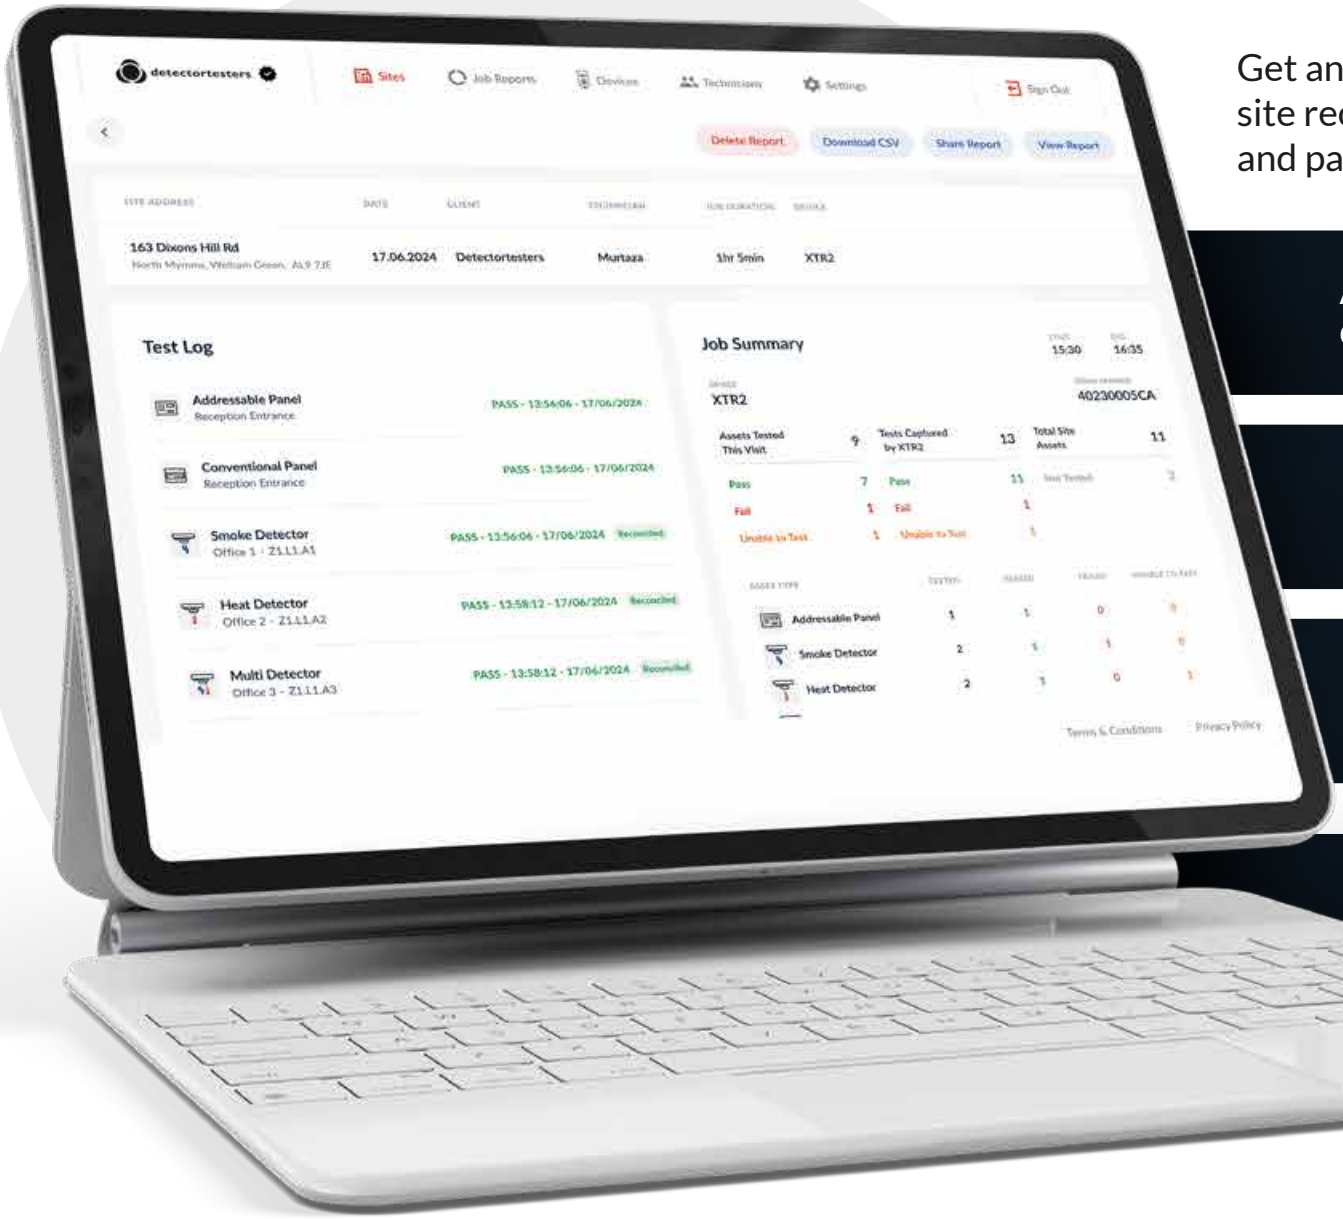

> Use the estimated alarm time to find the panel event corresponding to your test

> Select either alarm, or no alarm to show that your test results have been acknowledged by the panel

> Full testing loop ensured through visual detector LED and panel verification

Cloud portal

Get an instant overview of work carried out, site records, asset details, device information and past job reports.

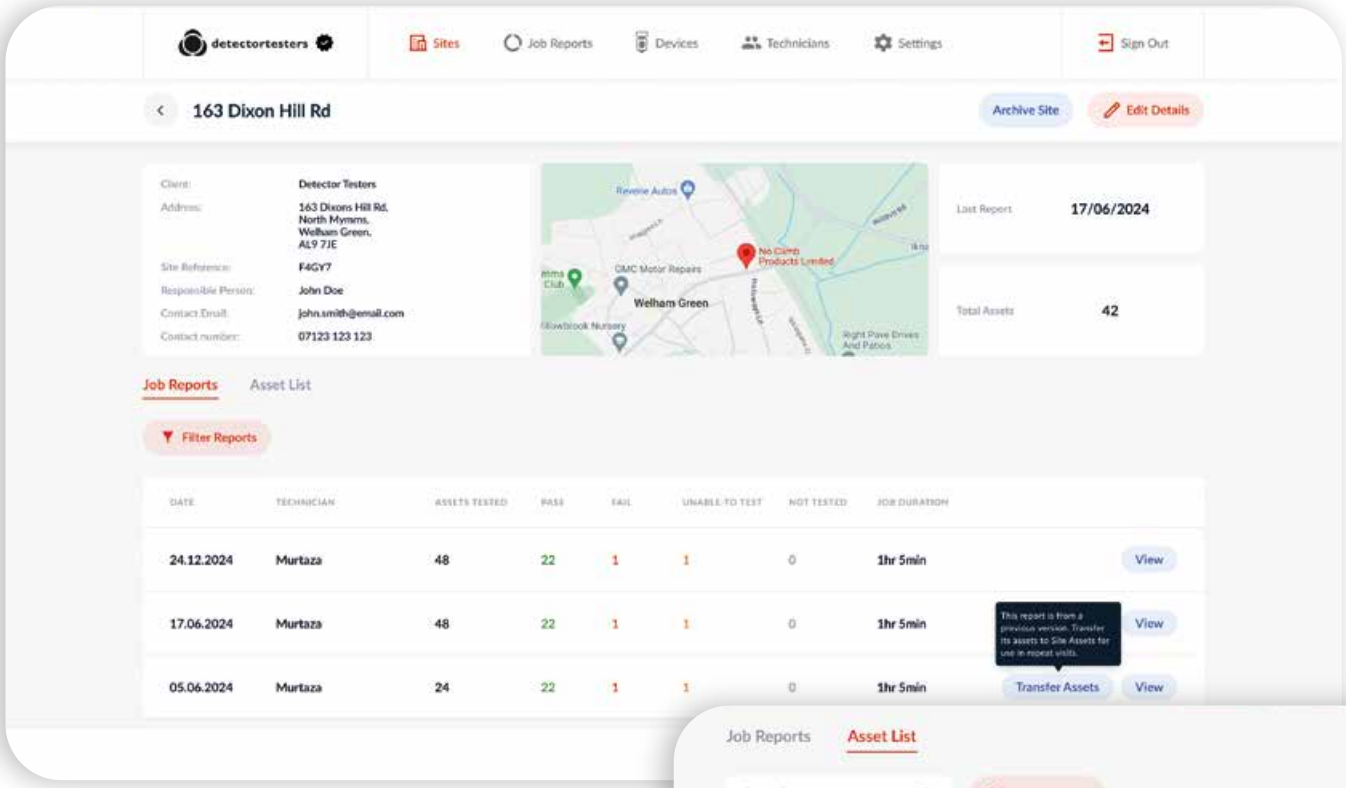

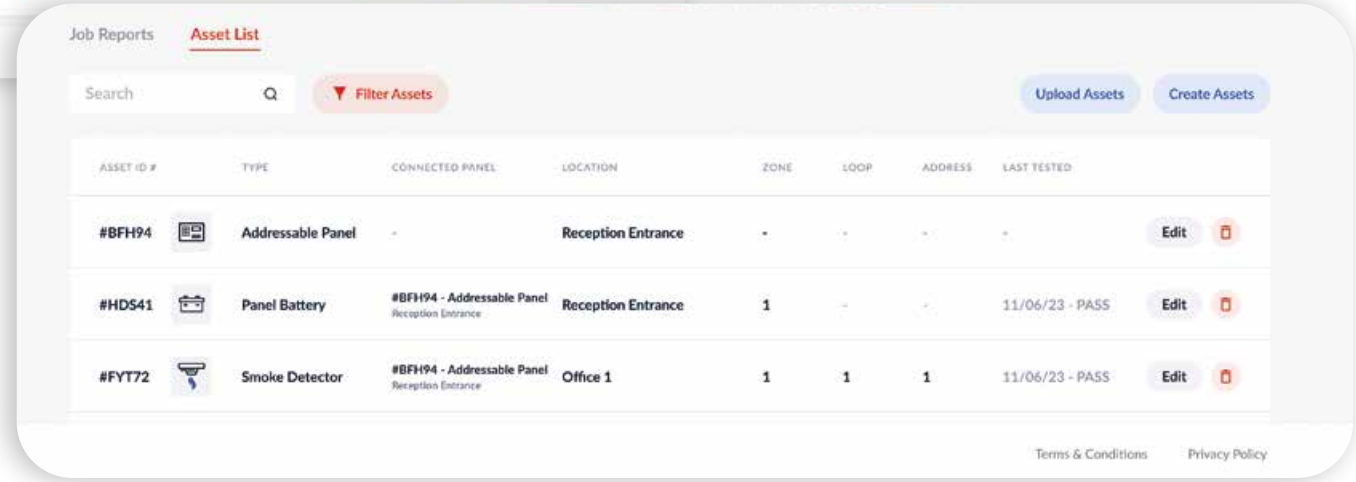

Access all test reports and device data from any location.

Share reports with clients in PDF or CSV formats.

Manage user accounts and device registrations.

Monitor device health, battery status and consumable levels.

Centralised site records

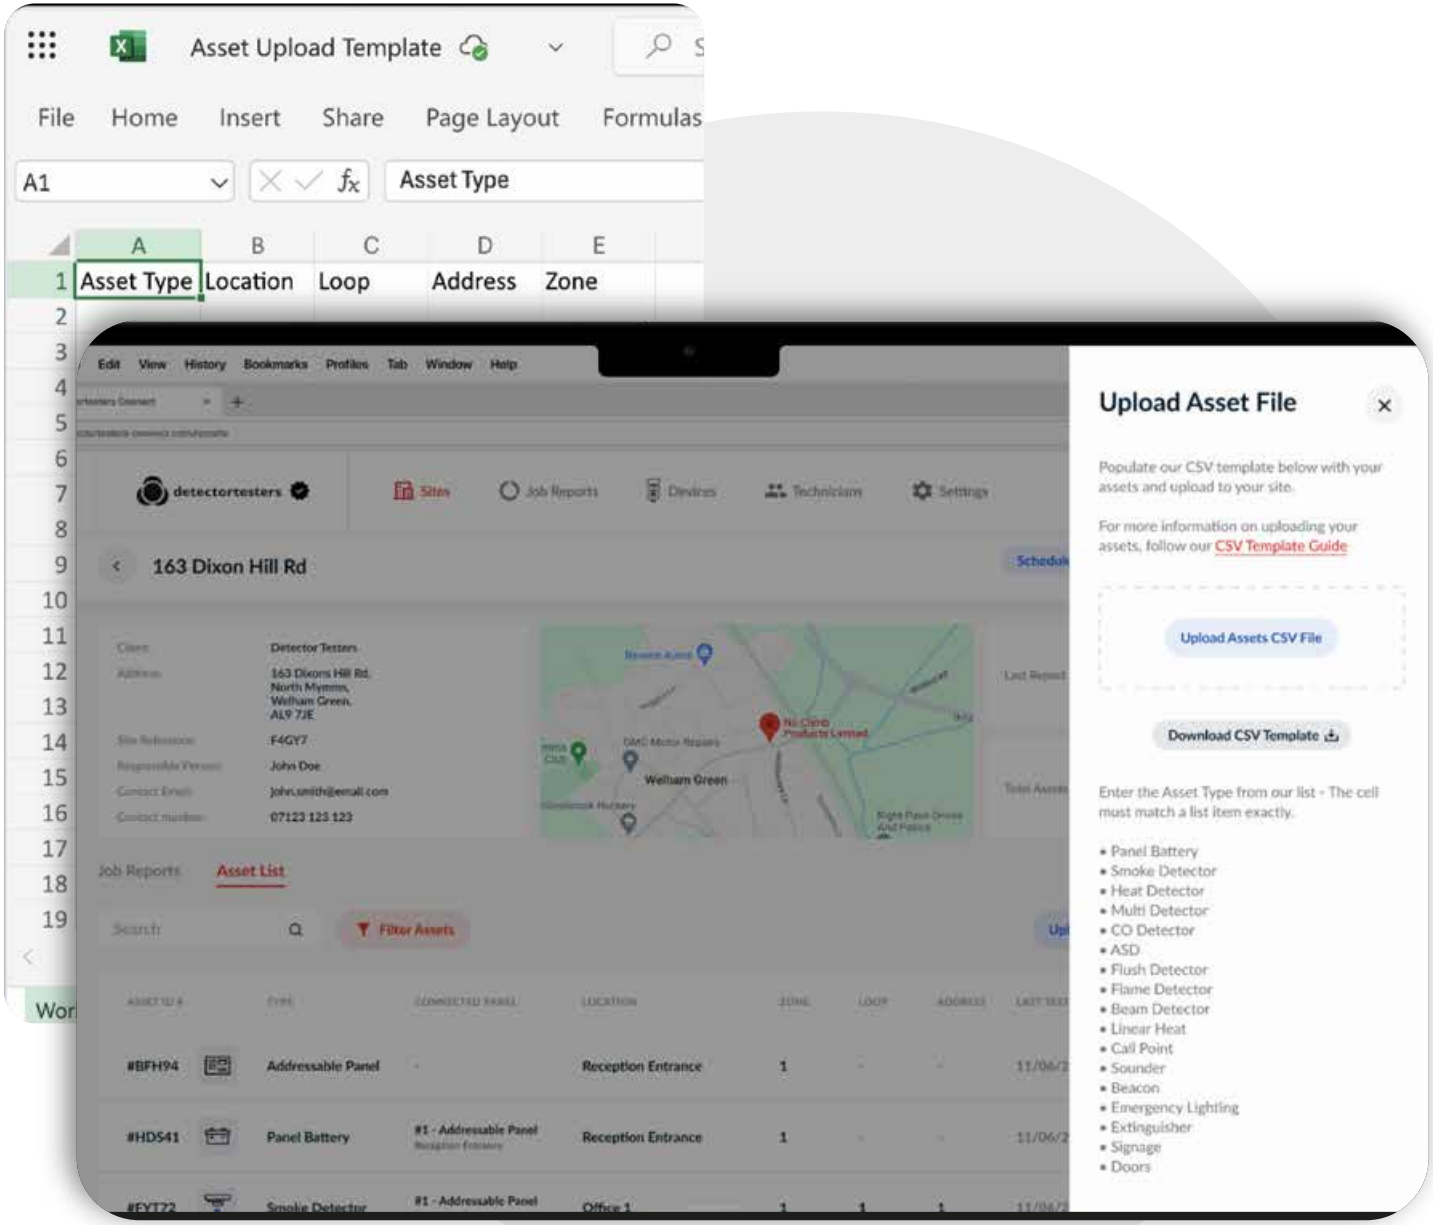

The sites tab centralises site records, storing asset details and past job reports for instant access.

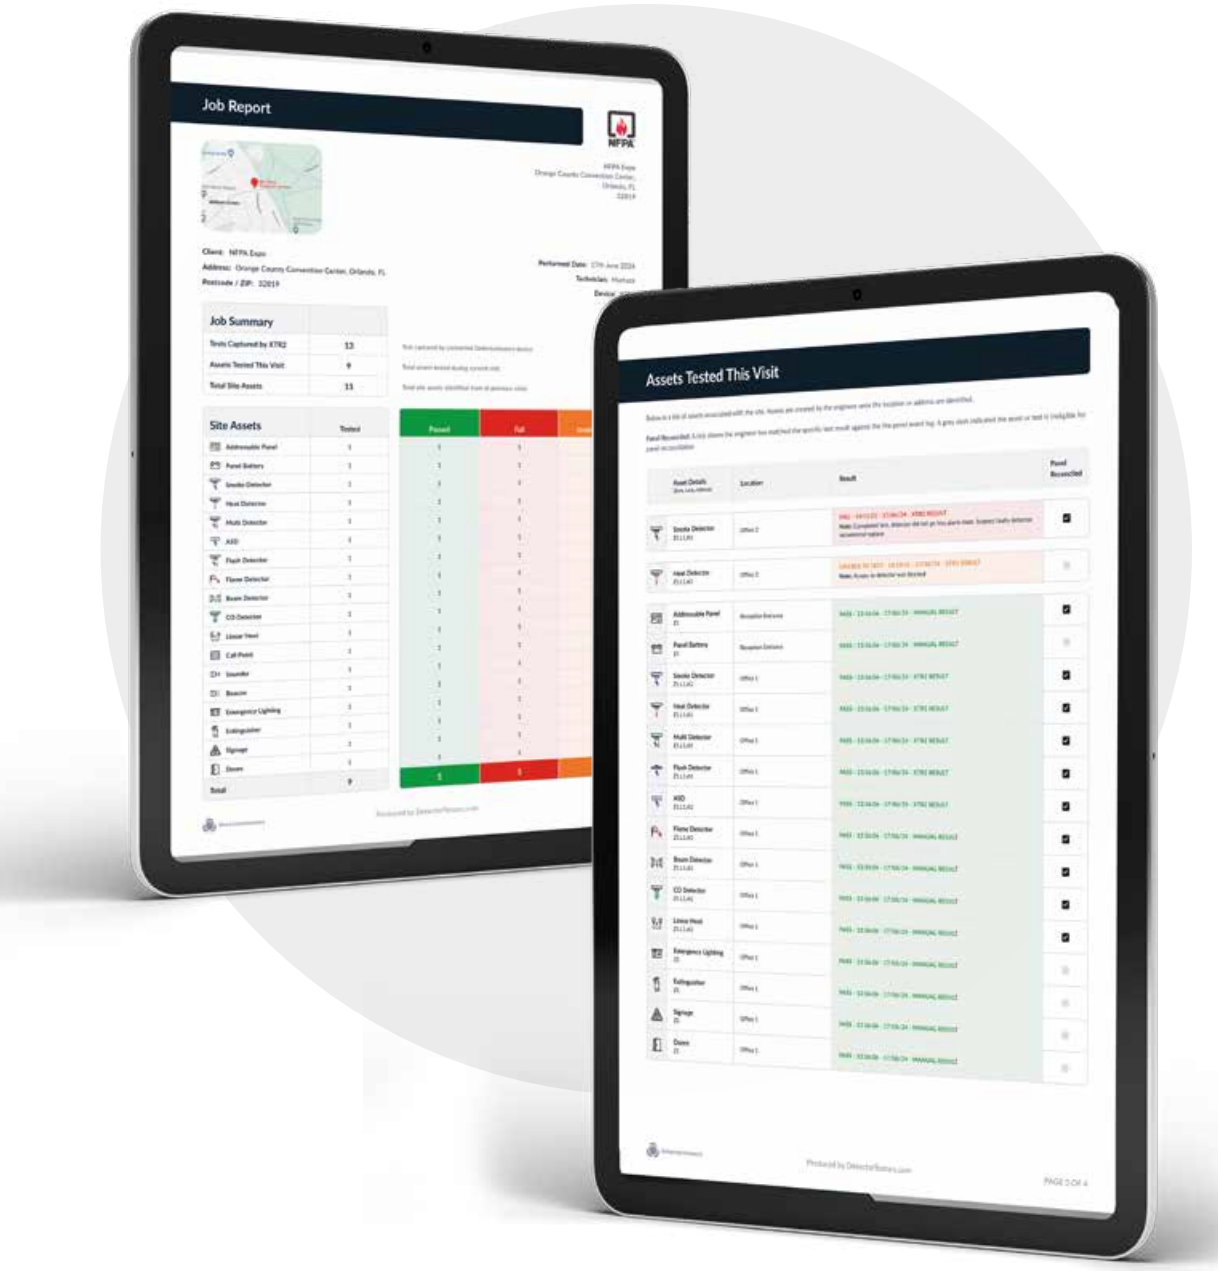

With secure cloud storage and offline capability, engineers can work seamlessly on-site and sync jobs later—eliminating lost paperwork and missing logs.

Transfer your asset data

Easily transfer asset data from existing spreadsheets or systems, seamlessly integrating old records into the automated DT Connect workflow.

> CSV Template provided

Instant test reports

Auto-generated reports, instantly available after the job is completed.

Get a full test breakdown, digital signatures, and easy sharing methods. Ensure a seamless digital audit trail and client confidence.

Report breakdown:

Job summary: Overview of the testing carried out, with a table including a summary of test results organised by asset type (only visible if you tested an asset).

Assets tested this visit: View of all tested assets, including asset information, and result. Ordered by result type.

Tests captured by XTR2: Chronological test log pulled directly from the device. Showing tests carried out, (smoke, heat, combined etc.).

XTR2

ENGINEERED FOR FASTER TESTING

Designed to work with all detector brands and models, with both addressable and conventional systems.

- > Rapid Smoke Generation
- > Faster Heat and Hi-Heat Activation *
- > Automatic Test Result Capture
- > Clearing Mode to Prevent Re-Alarms
- > Adaptable for ASD testing
- > Touchscreen User Interface
- > Seamlessly integrates with DT Connect

* 50% Faster heat activation than Testifire 1000
